Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Art Unit: 3711

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in-

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or

(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

Claims 1-10, 12-17 are rejected under 35 U.S.C. 102(e) as being anticipated by Nolan.

Nolan's belt discloses the claimed structure and is capable of being used to add weight to a hockey stick blade.

Nolan's pouches may be considered the means for securing the at least one weight and the wrap portion along with hook material 130 may be considered the adhering tape. Regarding claim 17 the sheet of flexible material with hook material 130 is adhering tape.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 11 is rejected under 35 U.S.C. 103(a) as being unpatentable over Nolan. Nolan's casing pockets are formed from two sheets of material sewn together. However, the examiner takes official notice that it is also commonly known to form pockets by folding a single sheet over and sewing it together to form the pocket. It would have been obvious to one of ordinary

skill in the art to have used this common sewing technique to eliminate the need to cut two separate pieces of material.

Claims 18-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nolan in view of Loschiavo. Nolan teaches the claimed method with the exception of the type of implement used. However, as disclosed by Loschiavo it is known in the hockey stick art to weight a blade for training purposes. Further Loschiavo discloses the use of a weight 24 within the surface area of the blade just as Nolan's weights are with in the surface area of the bat. In view of Loschiavo's teaching it would have been obvious to one of ordinary skill in the art to have practiced Nolan's method on a hockey stick blade as well.

Dawes, McSorley, Stewart, and Carbonero have been cited for interest because they disclose similar devices.
